

# THE CURRENT WEATHER REPORT LIVE FROM TYROL

## WEATHER IN SERFAUS-FISS-LADIS

Your holiday is approaching swiftly and the anticipation is growing. The first question that comes to mind: How is the weather going to be in the Alps of Serfaus-Fiss-Ladis? All current weather data and daily trends, including forecast for the upcoming days, are available at a glance now!

**today, Sunday 27.04.2025**

A Scandinavian high will expand into Central Europe over the coming days and will essentially take control of the weather situation. With the start of the new week, the sun will increasingly dominate the weather. At the same time, the air will warm up, and temperatures will continue to rise day by day. However, since the air mass over our region will remain unstable, we will repeatedly have to expect the development of larger cumulus clouds during the day. As a result, the risk of local showers and thunderstorms will increase from the late afternoon onwards. Nevertheless, on some days and in some places, it will likely remain dry.
